## TIMBERLINE

*A New Generation of Beauty*

**Won't dent, crack, split or warp ...** They've been developed specifically to provide the rich textured warmth of real wood — without the maintenance problems.

**Timberline really retains it's beauty ...** The woodgrain on a Timberline WoodGrain door is 25% deeper than similar products, so whether you decide to paint or stain, your door will retain it's natural wood appearance.

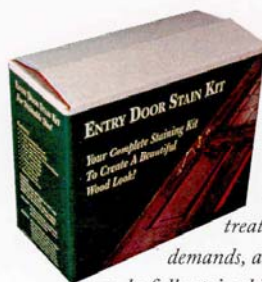

**Better efficiency ...** Timberline WoodGrain features a polyurethane insulated core, providing five times the insulating value of wood. Because they don't expand or contract, Timberline doors will not stick on hot, humid days or let in cold, damp air during the winter.

**Lifetime protection ...** From the moment a Timberline WoodGrain door is purchased, it's under a limited lifetime warranty. The homeowner's investment is safe.

*The Timberline family of doors harbors both the natural warm appeal and 5 times the insulating value of a wood door.*

*All doors in the Timberline family are engineered for strength as well as beauty.*

**Timberline stain kit ...** includes everything you need to stain your Timberline Fiberglass door for the most natural wood look. The kit is available in oak or walnut stains.

*Unlike the multi-coat stain treatments that wood demands, a Timberline door can be fully stained in about an hour.*
